

Lighting instructions

This lumpwood charcoal will light easily without the use of lighting fuels. Just use some scrunched-up newspaper and cover with a thin layer of charcoal. Light and add more charcoal as needed. Wait 10 to 15 minutes until hot.

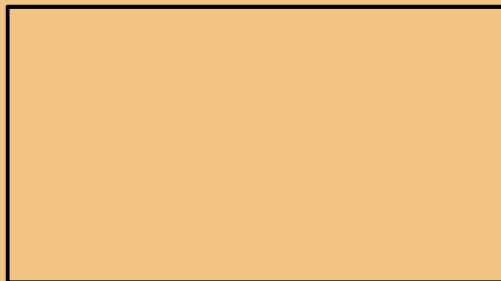

Start barbequing!

Danger from carbon monoxide -
always use outside or in a well ventilated area.

The timber resource

The wood we use to make this charcoal comes from sustainably managed broadleaf woodlands in Britain. These woods are coppiced or thinned as our woods have been managed for thousands of years. The continuing management of these woods benefit wildlife, people and the local economy.
